	UNITED STATES DISTRICT COURT		
12	NORTHERN DISTRICT OF CALIFORNIA		
13	SAN FRANCISCO DIVISION		
4			
15	UNITED STATES OF AMERICA,	No. CR-14-00175-WHA	
16	Plaintiff,	UNITED STATES' PROPOSED QUESTIONS	
17	v.		
18	PACIFIC GAS AND ELECTRIC COMPANY,		
19	Defendant.		
20		,	
21	The United States, through Assistant Unit	ted States Attorneys Jeffrey Schenk, Philip Kopczynski,	
22	and Noah Stern, hereby submits the below draft questions for consideration by the Court to propound to		
23	PG&E, in response to the Court's order dated February 15, 2021. See Dkt. 1302. The United States		
24	focuses its questions on PG&E's current inspection practices, its analysis (if any) of whether healthy		
25	trees with the potential to strike power lines should be documented and/or worked in some		
26	circumstances, and whether it has addressed these issues with its regulators. In proposing these		
27	questions, the United States does <i>not</i> assume that the gray pine suspected to start the Zogg Fire was		
28	UNITED STATES' PROPOSED QUESTIONS 1 CR-14-00175-WHA		

healthy, but acknowledges that a final answer to that question may not be available until Cal-Fire completes its investigation. Further, the questions are not intended to express a viewpoint on the appropriate course of action; rather, the United States seeks to supplement the record on the issues currently before the Court regarding PG&E's probation terms. The United States' proposed questions are as follows:

- 1. According to PG&E's 2021 wildfire mitigation plan, PG&E began using its tree assessment tool ("TAT") in March 2020 as part of its Enhanced Vegetation Management patrols to assess all trees that have the potential to strike its power lines. Are all trees assessed with the TAT documented regardless of the outcome (*i.e.*, is a record of the result of the TAT created even if no work was needed)? Does PG&E currently use (or plan in the near future to use) its TAT during routine vegetation management patrols or CEMA patrols? If the gray pine that is suspected to have caused the Zogg Fire still stood, would it have been assessed with the TAT in 2021? If not, can PG&E estimate when it would have been assessed with the TAT?
- 2. For the 2021 fire season, has PG&E made any changes to the processes it uses to identify dead, diseased, or dying trees with the potential to strike power lines during *routine* vegetation management patrols? For the 2021 fire season, has PG&E made any changes to the substantive standards it uses to determine whether a tree should be worked or removed because it is a dead, diseased, or dying tree with the potential to strike a power line? If so, identify the changes.
- 3. Had the gray pine suspected to have caused the Zogg Fire been found to be dead, diseased, or dying during the routine vegetation management patrol in 2020 but was not yet worked by the time of the wind event during which the Zogg Fire sparked, would it have been considered under the PSPS process proposed in Condition 11 had Condition 11 been implemented by the time of the wind event? In other words, if the gray pine was found to be dead, diseased, or dying, would it have been classified as a Priority 1 or Priority 2 tree, or is it possible the inspector could have classified it Priority 3 or some

other category not addressed by Proposed Condition 11?

- 4. Has PG&E analyzed whether there are circumstances in which trees that have the potential to strike power lines but are healthy and not in violation of minimum clearances required by California Public Resources Code Section 4293, California Public Utilities Commission General Order 95, and Federal Energy Regulatory Commission FAC-003-4 should be worked or removed? If so, what conclusions did PG&E reach? Has this issue been the subject of any regulatory process or analysis?
- 5. Does PG&E have the authority to remove potential strike trees other than those that are dead, diseased, dying, or identified by PG&E's TAT as "abate"?
- 6. Has PG&E analyzed whether all trees that have the potential to strike its power lines should be documented regardless of their health and/or whether they need to be worked? If so, what conclusions did PG&E reach? Has this been the subject of any regulatory process or analysis?
- 7. In its filing, ECF 1300, PG&E stated that "[c]onsistent with industry practice, PG&E . . . does not require pre-inspectors on routine vegetation management patrols to generate records for trees that they do *not* identify for work." Is PG&E aware of any utilities that generate records for trees that are not identified for work during routine patrols? If so, what trees are identified? Does PG&E require inspectors to document any trees that are *not* identified for work during CEMA or EVM patrols?

power lines that would not have been subject to work or removal under c			
EVM standards? If so, what proportion of total fires sparked by PG&E e sparked by healthy trees falling on power lines?  DATED: February 17, 2021 Respectfully submitted,  DAVID L.
